Professional Experience:

Experienced in both the business and web development fields, I am enrolled in both the University of Southern California Marshall Business School along with the Georgia Tech Coding Bootcamp. My business experience includes interning for the Atlanta Dream Corporate Partnerships team and inDigital as a marketing assistant.

Web Development Skills:

- Languages
 - HTML, CSS, Javascript, JQuery
- Technologies
 - Github, VSCode, Terminal

Projects:

- Work Day Planner
 - This project is a daily planner that can be used for people to plan out their work day. The planner is for the standard work hours of 9am - 5pm. When the user enters in their notes for each hour, they can save it to local storage. The planner will also display the current hour, and past and present hours will be identified by their color.
 - Uses HTML, CSS, Javascript
 - <https://github.com/patrickhannan/05-daily-planner>
- Password Generator
 - This project is a program that generates a completely random password based on a few selections that the user makes. This password will be between 8 and 128 characters, and it will contain any combination of the following character types: lowercase letters, uppercase letters, numbers, and all special characters.
 - Uses HTML, CSS, Javascript
 - <https://github.com/patrickhannan/HW-Password-Generator>
- Weather Dashboard
 - This project is an app that shows the current weather and the 5 day forecast of a city that the user searches. The user's search history will be saved so that they can come back to this page and easily access their city's weather. The dashboard displays temperature, uv index, wind speed, and humidity
 - Uses HTML, CSS, Javascript, JQuery
